

**Supplemental Table B.** Regression coefficients ( $\beta$ ), standard errors (SE), Wald test statistic ( $Z$ ), and corresponding  $P$ -values (2-tailed) for models with the digital elevation model as the single predictor of log burrow intensity for each study site. Results for MX1 and SC2 are not displayed because the null model (homogeneous Poisson point process) could not be rejected.

Site	$\beta$	SE	$Z$	$P$
FW1-2011	0.769	0.185	4.147	< 0.001
FW1-2015	0.762	0.195	3.904	< 0.001
FW2	0.176	0.055	3.215	0.001
SC1-2011	0.273	0.086	3.168	0.002
SC1-2015	1.114	0.194	5.749	< 0.001
SC2	-	-	-	-
MX1	-	-	-	-
MX2	0.209	0.056	3.756	< 0.001
