Supplemental Table 2. Pairwise comparisons of adjusted p-values for population differentiation in dietary composition in the spring (below the diagonal) and fall (above the diagonal). Chapin Forest (CF; S), Squire Valleevue Farm (SVF; S), Manatoc Scout Reservation near Cuyahoga Valley (CV; S/U), Edison Woods (EW; S/U), East Harbor State Park (EH; U), and South Bass Island (SBI; U). Significant results are in bold.

Supplemental Figures

Supplemental Figure 1. Total number of leaf litter invertebrates summed across seasons from each site. Striped sites include Chapin Forest (CF; S) and Squire Valleeve Farm (SVF; S). Polymorphic sites include Manatoc Scout Reservation near Cuyahoga Valley (CV; S/U) and Edison Woods (EW; S/U). Unstriped sites include East Harbor State Park (EH; U) and South Bass Island (SBI; U).

Supplemental Figure 2. Mean dietary niche breadth for each morph and population for the spring season, measured by the Shannon diversity index. Red represents striped morphs (S), black represents unstriped morphs (U). Error bars denote standard error of the mean.
